SUMMARY

Service desk analyst with a B.S. in Computer Science and a development background, focused on turning recurring incidents into permanent fixes. Builds internal tooling and automation to reduce ticket volume rather than absorb it.

SKILLS

Support & Infrastructure: POS systems, Windows, network troubleshooting (DHCP/DNS/static IP/VLAN), BigFix, ticketing & escalation, Aruba/Cisco switch environments

Languages: Go, Python, Java, SQL, JavaScript, Bash, Batch/PowerShell, HTML/CSS

Technologies: Git, Linux, Docker, QEMU/KVM, SQLite, MySQL, PostgreSQL, HTMX, Alpine.js, REST APIs

Certifications: CompTIA Project+ | SEC+ (in progress)

EXPERIENCE

Service Desk Analyst I — Yum! Brands / Taco Bell February 2026 – Present

- Provide Tier 1 support for restaurant POS and network infrastructure across a national store fleet, diagnosing connectivity, hardware, and configuration issues with non-technical store staff over the phone.
- Identified a recurring incident pattern in store network bridge adapter misconfiguration and independently developed a self-service batch remediation tool, designed for store employees to run without analyst phone guidance.
- Iterated the tool through 11 versions adding dry-run mode, adapter auto-detection, partial-configuration repair, and run logging; validated it in a purpose-built Windows 11 VM environment and authored an internal proposal for fleet-wide deployment via BigFix.
- Maintain a perfect score across all quality assurance evaluations to date.
- Handle an average of 25–30 support calls per day at a 12.5-minute average talk time, resolving issues efficiently while sustaining evaluation quality.

Freelance Developer — Self-Employed, Orange, CA Aug 2025 – Present

- Developed custom internal tools for small businesses to streamline data management and reporting workflows, reducing manual processing time.
- Integrated third-party APIs into existing websites and systems to extend functionality and improve client operational efficiency.
- Developed custom Tradovate plugins using JavaScript to visualize Change of Character and Break of Structure in real time.

Presentation Expert — Target, Orange, CA Jan 2021 – February 2026

- Increased in-stock accuracy by 15% through regular inventory audits and resolution of backend system discrepancies; executed 300+ merchandising transitions on tight timelines.

Manager — Jason's Catered Events, Orange, CA Aug 2014 – February 2026

- Troubleshoot AV equipment and managed digital order tracking systems, reducing technical delays and improving cross-venue communication.

PROJECTS

Personal Portfolio Website — Go, Gin, HTMX, Alpine.js, SQLite zachkp.dev

- Built and deployed a full-stack site with dynamic HTMX-driven content loading, a custom URL shortener with click tracking, and an admin dashboard.
- Implemented privacy-conscious visitor analytics using SHA-256 IP hashing and GDPR-compliant retention policies.

GoMail — Go, Bubble Tea, IMAP, fzf github.com/Zachkp/GoMail

- Terminal-based email client with a responsive TUI, IMAP integration, and regex-based message parsing, using Go's concurrency model for fast fetch and render.

go-ytm — Go, Cobra CLI, Bubble Tea, yt-dlp, mpv github.com/Zachkp/go-ytm

- Terminal YouTube Music streamer integrating external system tools for search, streaming, and playback from the command line.

EDUCATION

Western Governors University — B.S. Computer Science

June 2024
